

Yellowstone and Grand Teton National Park

Geothermal wonders of the world

Depart from **Salt Lake City** in your motorhome to get to **Yellowstone and Grand Teton National Parks**. These parks overlap 3 states: **Wyoming, Idaho and Montana**. Prepare to be amazed by the different landscapes and geothermal phenomena that you are about to discover!

From **Salt Lake City** you have about 365 miles to do in your motorhome before reaching the **number 1 park in the USA, Yellowstone National Park**. The roads in the USA are well suited for motorhome travel and offer easy driving conditions. Yellowstone National Park is one of the most famous parks. It takes its name from the colour of its surrounding cliffs. The park is more than 9000 square km of canyons, meadows, forest, waterfalls and thermal geysers, with a rich wildlife including bison, elk and bears. The park is known for its geothermal features - don't miss ' **Old Faithful Geyser**' with its boiling water jet of up to 50 meters high. Also stop by **Mammoth Hot Springs** and its beautiful surrounding scenery.

There are 5 different entrances to the park because it is divided into 5 different areas: **Geyser Country, Lake Country, Canyon Country, Roosevelt Country** and **Mammoth Country**. You can certainly camp in your motorhome within the park and travel through it as long as you are cautious when driving and respect the speed limits.

You can also visit **Grand Teton National Park**, south of Yellowstone, and explore a glacial valley and the famous Rocky Mountains. The wildlife is abundant in the park and includes moose, elk and grizzly bears.
